Counting items using cycle counting

1 Select **Inventory Count > Cycle Count**.

2 Specify or review this information:

Whse

The code of the warehouse where the items are stored.

Empl ID

The employee number assigned to you.

Mode

The criteria to count items. Possible values:

- Full
- UnCounted

Loc

The location used for processing the cycle count transaction.

Note: The `Invalid Location` message is displayed if the selected location is not associated with cycle count records.

Item

The item to be counted.

Note: An `Invalid Item` message is displayed if the selected location is not associated with cycle count records.

Lot

The lot number associated with the item. This field is displayed only if the **Item** field is blank or the specified item is lot controlled.

Note: An `Invalid Lot` message is displayed if the selected location is not associated with cycle count records.

3 Click **Next**.

4 Select the location and the item in the screen that is displayed.

Note: You can specify the lot number, if required.

5 Click **Next**.

6 Specify this information in the screen that is displayed:

Loc

The location used for processing the cycle count transaction.

Note: This field is available only if the **Input Loc** parameter is selected for this transaction.

Item

If applicable, scan the item number to confirm you are counting the correct item. This field is only available if the **Input Item** parameter is selected for this transaction.

Lot

If applicable, scan the lot number to confirm you are counting the correct lot. This field is only available if the **Input Lot** parameter is selected for this transaction.

Qty

Specify the counted quantity.

7 Click **Process**.

8 Specify or review this information if the item is serialized:

Cycle Count Records

The total number of cycle count records for the serialized items from the item lot location.

Records Counted

The number of cycle count records counted for the serialized item lot location.

Serial

The serial number for each item.

Scanned

The total quantity of serial numbers to scan.

Count Completed for Item/Lot/Location

The option to indicate if the counting process is completed. Possible options:

- Yes
- No

Note: The **Process** option is enabled, only when you set this field to **yes**.

9 Click **Next**.

Note: This option is displayed only if the selected item is serial-controlled. You must scan or select the serial number for each item, in the **Serial** field. The **Scanned** field displays the count of the serial numbers you have scanned. You can also click **Show List** to view the available serial numbers, or click **Clear List** to clear all the scanned serial numbers.

10 Click **Process** after scanning the required quantity of serial numbers.

Note: The application prints the labels if the transaction is configured to print labels automatically. Else, the **Label Printing** screen is displayed wherein you can specify the required details.

Cycle Verify

Use this form to view mismatches or uncounted items on the scanner without having to open the cycle count sheet. This form is used by supervisors or inventory controllers. The scanner displays all locations and the number of mismatches in each location. If you recount the mismatches, the scanner displays the cut-off quantity and status as counted. After the mismatch is recounted, the previous counts are replaced with the new counts.
