## Chapter 3: Events

The event module allows you to plan a public or social occasion. You can perform various actions related to booking an event such as allocation of guest rooms, catering, booking a function hall, and estimating the number of guests attending the event and making the necessary arrangements. You can use the **Event Calendar** page to create a new event and the **Event** page to view or modify details related to an existing event.

### Events Calendar

The **Events** calendar page enables you to view the upcoming and the past events, to plan and perform business related activities.

The data on this page is displayed based on the values specified in the **Site** and **Date** fields. To view an accordion corresponding to each site with the status colors defined for the applicable sites, you must enable the **Event Calendar Legend** option.

The information related to an event is displayed in a specific format when you rest the pointer on the event in the calendar.

**Note:**

- You can also select more than one site to view the related events booked for multiple sites.
- When multiple sites are selected in the **Site** field, a separate section for each site with related details is displayed in the events calendar.

You can specify the **Start Time** and **End Time** to view the events that are created within the selected time range.

These are the four types of views for the event calendar:

- **Month:** A monthly view of events booked for a selected month.
- **Week:** A weekly view of the events booked for a selected week.
- **Day:** A full day view of events booked for a selected date.

**Note:** The event status badges are displayed on the event calendar, if you select this view.

- **Multiple Day:** A multiple day view of events booked for a selected number of days.

**Note:**

- The guest room blocks along with events are displayed in this view.
- This view displays the incremental series in hours within which, you can view the events. You can view the approximate start and end time of an event and the event function.

You can view the functions by event name or function type on the **Week**, **Day**, and **Multiple Day** views, based on the configuration set in the Settings functionality.

**Note:** This configuration is applicable to all the sites related to an enterprise.

You can click the left and right chevron icon to move forward and backward to view events booked for a selected month, week, date, or multiple dates. To move forward and backward by year, you can click the left and right double chevron icon. The details of an event are displayed in a window, if you click on the event. When the event is pending, an icon displayed to indicate the pending status of the event.

You can drag and drop an event and the related function to modify the start date, time, and location of a function in the events calendar. To change start and end time, you can rest the pointer over the function in the **Week** or **Day** view and drag the arrows left or right on either side of the function.

If you drag and drop an event that is scheduled at a location which is already booked for another event at the same time and date, the application displays a warning message to confirm whether the function status can be set to pending.

The event name or function type is displayed with a row with diagonal lines to indicate that the status of the function is pending in the **Day** and **Multiple Day** views in the Events Calendar. This enables you to identify scheduling conflicts or wait list events.

The Events, Functions, and Master Events recently added or viewed are displayed on the breadcrumb. You can rest the pointer on a business type to view details such as the name and the start date of the business type.

You can click the toolbar on the left of the page to view additional options. The event related details can be viewed on the calendar based on the options enabled in the toolbar. See [Events Calendar toolbar](#) on page 19.

## Events Calendar toolbar

You can use the **Show Toolbar** option on the **Events** calendar page, to view and manage event details that are to be displayed.

You can perform the event related tasks, using these options:

- **New Event:** Enables you to create a new event.
- **New Master Event:** Enables you to create a new master event.
- **Quick Entry:** Enables you to add a placeholder event to the site.
- **Batch Generate Documents:** Enables you to generate documents in a batch.
- **View Leads Pending:** Enables you to view the pending leads for events.
- **Show Lead Option Holds:** Enable this option to view the option holds in the events calendar.
- **Show Master Events:** Enable this option to view master events associated with the events.

You can set the filter(s) such as, event status, event type, name of the location, location group, location type, or site type, based on which the event details are displayed on the calendar.

**Note:**

- The name of the location linked to location groups is based on the value selected on the **Edit Location** page of Settings functionality.
- The **Location Types** field is displayed when you select the **Day** or **Multiple Day** view.

You can click the chevron-down icon corresponding to the **List Views** section to view these options:

- **Master Events:** Use this option to view a list of master events. See, [Master Event List](#) on page 90.
- **Events:** Use this option to view a list of events. See, [Event List](#) on page 88.
- **Functions:** Use this option to view a list of functions. See, [Function List](#) on page 87.
- **Event Guest List Bookings:** Use this option to view a list of event guest list bookings. See, [Event Guest List Bookings](#) on page 91.

You can click the chevron-down icon corresponding to the **Availability Options** section to view these options:

- **Check Availability:** Use this option to check availability of a location for a function on the **Check Availability** page. See, [Check Availability](#) on page 92.
- **Check Package Availability:** Use this option to check availability of package related to the site on the **Check Package Availability** page. See, [Check Package Availability](#) on page 93.

You can click the chevron-down icon corresponding to the **Guest Rooms Filters** section to view these options:

- **Room Details:** You can select the appropriate check box to view the details related to the Contracted, Blocked, Forecast, and Pickup room count for the New Bookings, Remaining Inventory, Tentative Bookings, and Definite Bookings. You can also view the rooms blocks and the transient or contract blocks.
- **Guest Room Type Categories:** You can select the appropriate check box to view the details related to the guest room categories for the New Bookings, Remaining Inventory, Tentative Bookings, and Definite Bookings.

You can click the chevron-down icon corresponding to the **Usage Options** section to view these options:

- **View Daily Menu Mix:** Use this option to view menus and service items sold to all events booked in a site for a specific date. See, [View Daily Menu Mix](#) on page 94.
- **Inventory Usage:** Use this option to view the resources in the inventory used in all events held. See, [Inventory Usage](#) on page 95.
- **Location Capacity Usage:** Use this option to view the maximum capacity of a specific venue or event space that is being utilized. The capacity usage of a location is based on the number of guests attending the scheduled function or event.
- **Location Occupancy:** Use this option to view the number of days for which each location is booked with the occupancy percentage of the location. See, [Location occupancy](#) on page 95.

The primary dates can be added to the calendar, using the **Manage Important Dates** option from the toolbar. See, [Manage Important Dates](#) on page 97.

You can click the **Calendar Settings** option to set the calendar for events on the **Events** calendar page:

- The data displayed on this page is based on the values specified in these fields:
  - **Daily Timeslot Increment**
  - **Daily Timeslot Width**

- **Multiple Days Timeslot Increment**
  - **Multiple Days Timeslot Width**
  - **Sort Events By:**
  - You can click the chevron-down icon corresponding to the **Important Dates** section to view these options:
    - **Show Holidays:** Enable this option to view the dates marked as holiday on the calendar.
    - **Show Disabled Dates:** Enable this option to view the dates marked as disabled on the calendar.
    - **Show Notes:** Enable this option to view the note for the event on the calendar.
  - You can click the chevron-down icon corresponding to the **Event Details** section to view these options:
    - **Show Grouped Dependencies:** Enable this option to view location dependencies.
    - **Show Event name before Function type:** Enable this option to view event name before function type.
    - **Show Graphical Indicators:** Enable this option to view graphical indicator. You can review the booking details of an event and the functions associated with the event using the graphical indicators.
    - **Show Pending Events Badges:** Enable this option to view the pending status badges on the event calendar which indicates that the function is pending.
    - **Show Event Status Badges:** Enable this option to view the event status badges on the event calendar.
    - **Show Cancelled Events:** Enable this option to view cancelled events.
    - **Link to Function in Calendar:** Enable this option to link function in the calendar.
    - **Hide Function Times:** Enable this option to hide the function time.
    - **Show Site Colors:** Enable this option to view the Event Status colors by Site. The **Event Calendar Legend** option on the Event Calendar page displays an accordion corresponding to each site to view the status colors configured for the applicable sites, when this option is enabled for more than one site.
- Note:** You can set the Event Status color code on the **Manage Lifecycle Event Calendar Colors** page in Settings.
- **Enable Guest Room Data Filtering using Guest Room Type Category:** Enable this option to filter guest room data using guest room type category.
  - **Enable Room Types by Location Group View:** Enable this option to view the location groups and the associated room types.
  - **Group Locations by Locations Group:** Enable this option to view location group and associated locations.

## Creating an Event

- 1 Select **Events**. The Events Calendar page is displayed.
- 2 Click **New Event**. The **Event** page is displayed.
- 3 Specify this information in the **Event Details** section:

### Restricted

Select this check box to restrict details of the event from being displayed to all users.

### Note:

- Users with the Manage Own Restricted Events and Manage All Restricted Events rights are authorized to select this check box.
- A user with the Manage Own Restricted Events right can restrict the events that are created by the user.
- All events can be restricted and all restricted events can be viewed, only if the user has the Manage All Restricted Events right.

**Primary Contact**

The contact person related to the event.

**Note:** You can search for the primary contact related to the event on the **Contact Lookup** page, using the Lookup option.

**Event Affiliate Account**

The affiliate accounts linked to the event.

**Note:** You can search for the Affiliate contact related to the event on the **Affiliate Account Lookup** page, using the **Lookup** option.

**Event Name**

The name of the event.

**Event Category**

The category in which the event is organized.

**Event Type**

The type of event that is organized.

**Market Type**

The market segment that the event is coming from such as Corporate, Government, or Leisure.

**Estimated Attendance**

The number of guests included in the event.

**Site**

The site where you require to perform the event.

**PMS Group Number**

The Property Management System(PMS) number linked to a group booking for an event. This value is retrieved from the Infor HMS application.

**Note:**

- The value in this field is displayed based on the PMS group number specified in the Infor HMS application and cannot be modified.
- The **View HMS Group** option is displayed on the **Guest Room Blocks** page, only if the HMS Interface configuration is enabled on the **Manage HMS Interface** Settings page and the PMS group number is linked to an event. However, this option is disabled, if the event has not yet synchronized with HMS and does not have the PMS group number. You can use this option to view the guest room block related data specified on the **Group Booking** screen of the Infor HMS application.

**Event Lifecycle Model**

The model identifies the lifecycle steps that is visible in the **Event Lifecycle** section.

**Service Fee Rate Option**

The service fee rate option applicable for billing.

**Lock Event Dates**

Select this check box to restrict the planned event from being rescheduled.

**Note:**

- This check box is a custom field available on the **Manage Event Custom Fields** page of the Settings functionality.
- A warning message is displayed if the event is being rescheduled, thereby, alerting the user that the selected date is not within the scheduled event timeframe.
- The change history is updated when this check box is selected or cleared. You can view the change history details, using the **View Change History** option on the Event Details page.
- The event booking dates or end of day adjustments for booking received from HMS application are added to the event, bypassing whether this check box is selected.
- The application does not consider event booking requests that are received from the gateway.
- This custom field can be added from the Event Lifecycle Model settings. See [Adding or modifying an event lifecycle](#) on page 294.
- This custom field can be added when creating a workflow rule. See [Adding or modifying a workflow rule](#) on page 508.

4 Specify the payment and billing contact details in the **Billing Details** section.

5 Specify this information in the **Function Details** section:

**Function Type**

The type of function organized for the event such as Bowling, Breakfast, and Ceremony.

**Function Date**

The date on which the function is organized.

**Location**

The location in which the function takes place.

**Note:** If the required location is unavailable, select the placeholder location.

**Start Time**

The time when the function starts.

**End Time**

The time when the function ends.

**Setup Minutes**

The time required to setup the facilities for the function.

**Teardown Minutes**

The time required to disassemble the facilities after a function ends.

**Room Rental**

The rental charge set for each location.

**Auto Update Attendance**

Select this check box to update the attendance automatically based on the number of guests who arrive during the function.

**Note:** If this check box is selected, the **Estimated Attendance**, **Guaranteed Attendance**, **Actual Attendance**, and **Set** fields are disabled.

**Estimated Attendance**

The number of guests included in the function.

**Is Pending**

Indicates whether a function is indicated as pending due to unavailability of a specific location for the same date and time. Possible values:

- **Yes:** If the function is created with pending status.
- **No:** If the function is created without the pending status.

**Note:**

- This field is displayed only when the user with the Administrator role adds the **Is Pending** field to the Function Page Layout in the Settings functionality. If a function is scheduled at a location that is already booked for another function at the same time and date, the application displays a warning message to confirm whether the status of the function can be set to pending.
- If a location is available due to cancellation of the function, the application automatically updates the first function in the waitlist for that location.
- The application automatically removes the pending status for the function, if you select a different time and location that is not overbooked.
- If multiple locations are selected for the function and one of the locations is unavailable, the status of the function is set to pending.

**6 Click **Save**.**

**Note:** You can also use these options:

- **Save and New Function:** Save the existing function and add one or more functions.
- **Save and Add Reservations:** Save the function and add a reservation to the existing function.
- **Save and Add Services:** Save and copy the existing details of the function.
- **Save and New Event with Function:** Save an existing event and add one or more event with functions.

## ~~Booking an event with function(s)~~

- ~~1 Select **Events**. The Events Calendar page is displayed.~~
- ~~2 Click **New Event**. The **Event** page is displayed.~~
- ~~3 Specify this information in the **Event Details** section:~~
